INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/FR2003/003835

I. Basis of the report

1. With regard to the elements of the international application:*

- ☐ the international application as originally filed
- ☒ the description:
pages _____ 1-8 _____, as originally filed
pages _____, filed with the demand
pages _____, filed with the letter of _____
- ☒ the claims:
pages _____ 1-13 _____, as originally filed
pages _____, as amended (together with any statement under Article 19
pages _____, filed with the demand
pages _____, filed with the letter of _____
- ☒ the drawings:
pages _____ 1/3-3/3 _____, as originally filed
pages _____, filed with the demand
pages _____, filed with the letter of _____
- ☐ the sequence listing part of the description:
pages _____, as originally filed
pages _____, filed with the demand
pages _____, filed with the letter of _____

2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language _____ which is:

- ☐ the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. ☐ The amendments have resulted in the cancellation of:

- ☐ the description, pages _____
- ☐ the claims, Nos. _____
- ☐ the drawings, sheets/fig _____

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**

* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rule 70.16 and 70.17).

** Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/FR 03/03835

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**1. Statement**

Novelty (N)	Claims	1-13	YES
	Claims		NO
Inventive step (IS)	Claims	1-13	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-13	YES
	Claims		NO

2. Citations and explanations

The invention relates to a fluid dispensing member for mounting on the opening of a fluid container, which member includes:

- a body defining an internal chamber with a variable volume, which body defines a lower end,
- an actuating rod axially movable back and forth in said body to vary the volume of said chamber, which rod includes a lower portion inserted into the body and an upper portion defining an upper end,
- a radially outwardly extending circumferential bearing flange including a lower surface at least indirectly engageable with one edge of the fluid container opening, and
- optionally a neck washer arranged in contact with the lower flange surface so that it is compressed between the flange and the edge of the opening.

A dispensing member of this type is known from document US-A-2002/066751. The aim of the invention is to provide a highly compact dispensing member that is compatible with container necks of almost any height while being exceptionally well balanced.

According to one feature of the invention, the axial height axially separating the lower flange surface from

International application No.
PCT/FR 03/03835

the upper end of the actuating rod is substantially the same as the axial height axially separating the lower flange surface from the lower end of the body. In an alternative embodiment, the axial height axially separating the lower surface of the washer from the upper end of the actuating rod is substantially the same as the axial height axially separating the lower washer surface from the lower end of the body.

The combination of features in each of independent claims 1 and 2 is not found in or obvious from the prior art. It follows that the subject matter of independent claims 1 and 2 is novel and involves an inventive step. Dependent claims 3 to 13 also comply with the requirements of PCT Article 33(2) and (3). Furthermore, claims 1 to 13 are considered to be industrially applicable.
